

Vision AI for Hospital Inventory Management

Eliminate manual audits, improve tracking accuracy, save costs, and focus on patient care.

Healthcare facilities face a dual challenge: staff shortages and inefficient inventory management. These challenges distract and disrupt the delivery of patient care.

Leverage Vision AI for autonomous inventory management. Enhance tracking accuracy, cut costs, automate reordering, and free up staff to focus on what matters most: patient care.

Unlock the Power of AI-Powered Automated Inventory Management

Upgrade from manual counts to AI-powered inventory management. Chooch Vision AI tracks, predicts, and optimizes stock levels; 24/7.

- **Count smarter: Track inventory levels in real time**
Monitor supply levels continuously. Track inventory removals instantly for accurate, up-to-the-minute counts without relying on infrequent, error-prone manual audits.
- **Save smarter: Reduce overstock carrying costs**
Free up capital, minimize waste, and optimize storage space. Smart ordering cuts excess inventory costs, prevents medication expiration, and boosts your hospital's operational efficiency.
- **Work smarter: Automate supply reordering**
Utilize real-time, data-driven insights to autonomously trigger reordering signals based on pre-set thresholds and supplier lead times.

Build Smarter Inventory Management with Vision AI

Secure and compliant platform

Chooch is GDPR and HL7 compliant, ensuring data security by keeping sensitive information on-premises while controlling cloud data transfers.

Core Benefits:

Modular, Scalable Architecture

Chooch leverages existing networks and integrates with ERP, PACs, and LIS systems to extend functionality.

No Change Management

Chooch streamlines existing workflows, reducing administrative tasks allowing staff to focus on patient care.

Flexible Deployment Options

Chooch deploys where it fits best for your institution: on the edge, in the cloud, or on-premise.
